

Based upon the many requests to again produce the Ayase/ Deringer Bi-Metal and Micro-Headers we are introducing the CFU-BM1 Bi-Metal Header and the CFU-OH Micro Header.

Our CFU Brand Headers are manufactured to the same precision specifications as was the Ayase/Deringer Headers. These dependable headers have been faithfully serving the industry for over 40 years and have been the overwhelming choice of Bi-Metal Contact Producers and Micro Parts Manufacturers worldwide.

Our CFU Mini-Headers are designed to hold the extremely tight tolerances that are required to manufacture parts for Computer Disc Drives, Medical Components, Electrical Contacts and similar Micro-Parts used in miniature Automotive and Aerospace components. If you have been looking for an Ayase/Deringer replacement, the CFU line of Micro Headers is the solution to your needs.
